This data handbook was generated on January 26, 2026 based on the metadata of the German National Cohort. The current version of the data handbook is available under transfer.nako.de/transfer/media/data-handbook. The next data handbook will be available in one to two months.

Preamble

The German National Cohort is the largest long-term population study currently being conducted in Germany. Over a period of more than 20 or 30 years, it intends to collect medical data for epidemiological research into common diseases - their causes, prevention, early diagnosis and treatment - and provide it to scientists. NAKO began recruiting people with a main residence in Germany who were randomly drawn from the population registries at the start of 2014. By September 2019, more than 205,000 people aged between 19 and 75 had been received at the 18 NAKO study centers for the first examination and included in the cohort as participants after signing the consent form. In the study centers, surveys (interview and self-completed) and examinations were carried out over a period of approximately three to six hours. Furthermore, biosamples were taken and stored long term. Further information about NAKO, e. g. the target diseases, can be found at nako.de/en and especially the study design and program in [1], [2], and [3].

The first written follow-up survey (GEFU-1) was successfully conducted from 2017 to 2023 with over 171k participants. The second survey was successfully conducted in the period from October 2018 to August 2024 with over 138k participants in the study centers. In addition, two special COVID-19 surveys were successfully conducted with up to 161k participants during the pandemic. The data collected directly from participants was supplemented by secondary and registry data as well as mortality data. Non-personal data, e. g. environmental data or statistical socio-economic data, were assigned to the participants via their place of residence. In an MRI sub-study, whole-body MRIs lasting one hour were performed on almost 31k (first assessment) and over 19k (second assessment) participants. In addition to the data derived from these medical data, this is essentially the dataset that scientists can now obtain from NAKO free of charge on request. A fee may be charged for the finite aliquots of biosamples.

The terms to use and access NAKO data is codified in particular in the use and access policy, which every scientist (who wishes to work with NAKO data) must undertake to comply with. The NAKO Transfer Unit in Greifswald and Heidelberg and its website TransferHub (transfer.nako.de) is the contact point for all scientists interested in the NAKO data. The data directory in TransferHub shows which data can be requested. The desired data elements can be selected, the application with the described research question can be submitted, and the compiled data can be downloaded from TransferHub after review, approval and conclusion of the contract with the scientific institution.

We define metadata as all data that describe the units and items of the NAKO data (e. g. identifiers, designations, descriptions, units of measurement, data types, scale levels, select options). This metadata is compiled together with some counts of units and items in this Data Handbook. The Data Handbook is intended solely to provide in-

formation about the NAKO data that can be requested outside TransferHub. Data must always be requested directly in TransferHub by selecting the specific data elements, and only data from completed surveys can be requested. It should also be noted that the number of participants is permanently reduced due to withdrawals of consent by participants and the removal of their data from the NAKO databases (small two-digit number per year).

Chapter 1

Overview of the examinations of the waves

This chapter aims to provide a quick overview of the examinations conducted in the actual waves and applicable for scientific evaluation.

1.1 Listing and counting of the examinations (units) in the Baseline examination

The following table lists all examinations (incl. interviews, et cetera) and their derivations of the Baseline examination of the baseline study (incl. MRI study). The column "applicable" counts the participants whose data is applicable for scientific evaluations within the framework of usage applications.

Examination (unit)	applicable
Basic data: Age, gender, extent of examinations	~ 204,700
Derived variables allergies	~ 204,300
Medical Anamnesis - Allergies (U1)	~ 204,400
Derived variables eye diseases	~ 204,300
Medical Anamnesis - Eye diseases (U1)	~ 204,300
Derived variables women's questions	~ 103,000
Women (U1)	~ 103,000
Derived variables skin diseases	~ 204,300
Medical Anamnesis - Skin diseases (U1)	~ 204,300
Derived variables HKE, SWE and HK-relevant OP	~ 204,400
Medical Anamnesis - Cardiovascular diseases (U1)	~ 204,400
Medical Anamnesis - Metabolic disorders (U1)	~ 204,400
Derived variables infectious diseases	~ 204,300
Medical Anamnesis - Infectious diseases (U1)	~ 204,300
Derived variables lung diseases	~ 202,800
Medical Anamnesis - Pulmonary diseases (U1)	~ 204,400
Derived variables gastrointestinal or liver diseases	~ 202,500
Med. An. - Gastrointestinal/liver diseases (U1-U3)	~ 204,300
Derived variables Medication registration	~ 201,100
IDOM Completion	~ 201,100
IDOM Evaluation	~ 201,400
Medical Anamnesis - Musculo-skeletal disorders (U1)	~ 204,400

Examination (unit)	applicable
Derived variables headache	~ 204,700
Derived variables Stroke, Epilepsy, Parkinson's disease	~ 204,400
Medical Anamnesis - Neurol. and psych. Disorders (U1)	~ 204,300
Derived variables kidney diseases	~ 204,600
Medical Anamnesis - Renal diseases (U1)	~ 204,300
Deriv. Var. Operations (without reference to HKE, SWE)	~ 204,600
Medical Anamnesis - Surgeries (U1)	~ 204,300
Derived variables Rare diseases	~ 204,600
Medical Anamnesis - Rare diseases (U1)	~ 204,300
Derived variables Sociodemography	~ 204,500
Socio-econom. Status (U1)	~ 204,500
Derived variables on cancerous diseases	~ 204,400
Medical Anamnesis - Tumour diseases (U1)	~ 204,400
End of interview (U1/2/3)	~ 203,900
Derived variables alcohol consumption	~ 204,000
Alcohol consumption (U1)	~ 195,100
Derived variables everday activities	~ 43,400
Everyday activities (U1/2)	~ 180,300
Working environment	~ 45,700
Derived variables Professional recognition	~ 156,100
Professional recognition (U1)	~ 177,100
Occupational stresses (U1)	~ 177,700
Drugs (U1)	~ 174,500
Derived variables on emotional functioning	~ 204,700
Mental health (U1)	~ 189,000
Stress, exhaustion and fatigue (U1/2)	~ 187,100
Family history (U1/2)	~ 178,200
family planning (men) (U1)	~ 48,600
early diagnosis (U1/2)	~ 190,500
Health-related quality of life	~ 196,200
Weight history (U1/2)	~ 171,300
Cardiovascular health (U1/2)	~ 187,300
Use of medical services	~ 169,700
Infections (U1)	~ 190,900
Derived variables Early childhood factors	~ 173,300
Childhood and Adolescence (U1)	~ 172,500
Headache (U1)	~ 175,700
derived variables - physical activity	~ 201,700
Physical Activity (U1/2)	~ 196,000
physical fitness (U1/2)	~ 197,100
Health insurance status (U1)	~ 93,200
Lung health (U1)	~ 190,300
gastrointestinal complaints	~ 170,200
Derived variables Insensitivity and movement of the legs	~ 52,200
Insensitivity and movement of the legs	~ 51,700
Derived variables personality	~ 185,600
Personality (U1)	~ 185,800
Derived variables - tobacco	~ 196,100
smoking (U1/2)	~ 195,600
Derived variables TS Sleep habits	~ 204,700
Sleeping habits (U1/2)	~ 173,700
Pain assessment	~ 51,500
Pregnancy (U1/2)	~ 194,500
Seeing and Hearing (U1)	~ 57,300
Derived variables social network	~ 174,200

Examination (unit)	applicable
Social network and social support	~ 171,200
Tattoos and solarium usage	~ 170,400
Handling animals (U1)	~ 51,300
Environmental influences (U1/2)	~ 175,300
Accidents / bone fractures (U1)	~ 170,800
Dental health	~ 188,700
Derived variables cpar24 General	~ 79,900
Derived variables cpar24 activity	~ 54,800
Derived variables nutrient intake	~ 152,300
Derived variables food consumption	~ 152,300
Derived variables nutrition intake	~ 151,200
Derived variables restricted foods	~ 151,200
Derived variables nondietary-data	~ 151,200
Derived variables nutrition intake by group	~ 151,200
Derived variables nutrition info	~ 157,500
Nutritional data ffq2	0
Vaccination data	~ 19,000
Evaluation variables abdominal fat ultrasound	~ 47,200
Ultrasound examination of the abdomen	~ 47,400
AGE-Reader Preparation	~ 47,600
AGE-Reader Completion	~ 44,400
Accelerometry - Evaluation of 10sec.agd-file	~ 72,500
Accelerometry - Issue Start	~ 132,800
Accelerometry - Issue Completion	~ 74,900
accelerometry - return start	~ 74,100
accelerometry - return completion	0
Derived variables Anthropometry and BIA	~ 203,700
Anthro/BIA start	~ 203,500
Anthro/BIA evaluation	~ 193,600
Derived variables blood pressure	~ 204,500
blood pressure	~ 203,700
Derived variables on measurement of hand grip strength	~ 204,400
measurement of hand gripping force	~ 201,500
modified Physical Activity Readiness-Questionnaire (PAR-Q)	~ 11,100
Ergometry Start	~ 9,900
Ergometry Completion	~ 10,400
Processed data FeNO measurement	~ 38,300
FeNO measurement Initialisation	~ 51,600
FeNO measurement Evaluation	~ 37,500

baseline data

Type	Program
Title	baseline data
Description	-
Subordinate	Demography, p. 9, Correction weights, p. 35

2.1 Demography

Type	Project
Superordinate	baseline data, p. 9 (Program)
Title	Demography
Name	Demography
Description	Demographic information such as age, gender, ethnicity, migration background
Subordinate	Basic data, p. 9, ethnicity and migration, p. 32

2.1.1 Basic data

Type	Examination (unit)
Superordinate	Demography, p. 9 (Project)
Name	Basic data
Title	Basic data: Age, gender, extent of examinations
Description	Baseline data: Age, gender, estimated number of completed examinations and surveys per examination wave according to internal accounting criteria.
Unique identifier	basisdaten
Approval	Quality-assured data

Data collection	Collected data				Applicable Records
	Participants	Records	Start	End	
Baseline examination	~ 204,600	~ 204,600	14/03/2014	30/09/2019	~ 204,600

2.1.1.1 General

2.1.1.1.1 Gender

Type	Variable
Superordinate	Basic data, p. 9 (Examination)
In subsection 2	General
Title	Gender
Description	Tested gender
Data type	SMALLINT(4)
Scale niveau	nominal
Approval	Quality-assured data
Option list	sex (m/f/d/x)

i) Baseline examination

Type	Data element
Unique identifier	u1_basis_sex

Options of the option list "sex":

Key	Identifier	Count in: Baseline examination	Missing
1	male	~ 101,400	No
2	female	~ 103,300	No
3	Miscellaneous	0	No
-9	unknown	0	Yes

ii) Calibration study

Type	Data element
Unique identifier	ku1_basis_sex

Options of the option list "sex":

Key	Identifier	Count in: Calibration study	Missing
1	male	~ 3,100	No
2	female	~ 2,900	No
3	Miscellaneous	0	No
-9	unknown	0	Yes

iii) Health follow-up survey 1

Type	Data element
Unique identifier	fu1_basis_sex

Options of the option list "sex":

Key	Identifier	Count in: Health follow-up survey 1	Missing
1	male	~ 83,600	No
2	female	~ 88,100	No
3	Miscellaneous	0	No
-9	unknown	0	Yes

iv) First Corona survey

Type	Data element
Unique identifier	co1_basis_sex

Options of the option list "sex":

Key	Identifier	Count in: First Corona survey	Missing
1	male	~ 77,800	No
2	female	~ 84,000	No
3	Miscellaneous	0	No
-9	unknown	< 10	Yes

v) Second Corona survey

Type	Data element

Unique identifier co2_basis_sex

Options of the option list "sex":

Key	Identifier	Count in: Second Corona survey	Missing
1	male	~ 55,800	No
2	female	~ 58,400	No
3	Miscellaneous	0	No
-9	unknown	0	Yes

vi) First re-examination

Type	Data element
Unique identifier	u2_basis_sex

Options of the option list "sex":

Key	Identifier	Count in: First re-examination	Missing
1	male	~ 68,600	No
2	female	~ 69,700	No
3	Miscellaneous	< 10	No
-9	unknown	0	Yes

2.1.1.1.2 survey date

2.1.1.1.2.1 survey date

Type	Variable
Superordinate	Basic data, p. 9 (Examination)
In subsection 2	General
In subsection 1	survey date
Title	survey date
Description	Calendar date of the first data collection in this wave. For data protection reasons, this variable is only released for use if its absolute necessity for answering the research question is sufficiently justified.
Unit or input format	yyyy-MM-dd
Data type	DATE
Scale niveau	metric
Approval	Restricted for data protection reasons

2.1.1.1.2.3 survey month

Type	Variable
Superordinate	Basic data, p. 9 (Examination)
In subsection 2	General
In subsection 1	survey date
Title	survey month
Description	Calendar Month of the first examination in this wave
Data type	INTEGER
Scale niveau	metric
Approval	Quality-assured data
Option list	Monate

i) Baseline examination

Type	Data element
Unique identifier	u1_basis_month

Options of the option list "Monate":

Key	Identifier	Count in: Baseline examination	Missing
1	January	~ 18,500	No
2	February	~ 17,700	No

2.1.2.1 Migration

The survey data was first divided into eight categories (+ missing):
MIG=0: German nationality, born in Germany, parents born in Germany or unknown/no information (no migration background), risk of misclassification if one parent is unknown.
MIG=1: Born as a German abroad and both parents born in Germany (no migration background).
MIG=3: Descendants of displaced persons: persons with German citizenship, born in

Germany, one parent born in Poland, Russia or the Czech Republic (no migration background), risk of misclassification.
MIG=4: Displaced persons: persons with German citizenship, born in Poland, Russia or the Czech Republic and who immigrated before 1953. Parents born in Germany or unknown, don't know, no information (no migration background).
MIG=5: Foreigners (migration background).
MIG=6: Descendants of persons with a migration background: persons with German citizenship, born in Germany, parents not born in Germany, Poland, Russia or the Czech Republic (migration background).
MIG=7: Naturalised persons: persons with German citizenship, born abroad, at least one parent born abroad, not ethnic German repatriates (migration background).
MIG=8: Ethnic German repatriates: German nationality, born in a selected country of the former Soviet Union (Russia, Ukraine, Kazakhstan, Belarus), parents also born in one of these countries or, if applicable, in a neighbouring country (migration background).
MIG=Missing: Insufficient information to determine migration status.
The derived variables for migration were determined on the basis of these categories.

2.2 Correction weights

Type	Project
Superordinate	baseline data, p. 9 (Program)
Title	Correction weights
Name	Correction weights
Description	Correction weights for taking into account the influence of sampling designs and non-response
Subordinate	Correction weights, p. 35

2.2.1 Correction weights

Type	Examination (unit)
Superordinate	Correction weights, p. 35 (Project)
Name	Correction weights
Title	Correction weights (survey weights)

Description	Design weights (wgt_design_) and total weights (wgt_total_; product of design weight and calibration weight) are provided for the NAKO data set. As a rule, the total weights (wgt_total_) should be used. The design weights (wgt_design_) should only be used in justified cases with appropriate expertise. While design weights only take into account the sampling procedure or the selection probability of survey units, the total weights also include the non-response probability of survey units and the distribution of certain characteristics within the population. The weighting was not based on the population distribution of Germany as a whole, but on the population distribution in the study regions actually covered by the NAKO study centres. The weights are provided in two standardisations (_18sc, _16sc): Normalisation to 18 study centres (_18sc) and a normalisation combining the three Berlin study centres (_16sc). The respective allocation to the study centres is coded in the variables wgt_geoSC_18sc and wgt_geoSC_16sc. Separate correction weights are provided for each survey wave (baseline, second study, third study), which can only be used for the data of the respective wave. The design weighting was based on the number and composition of the population (gender, age group) according to the official population update of the Federal Statistical Office (year: 2014-2019, regional level: municipality). The calibration weighting was carried out using a raking procedure (Iterative Proportional Fitting) based on microcensus data (year: 2019, regional level: district) for the characteristics: - age group (' 60'), - gender (female vs. male), - nationality (German vs. non-German), - migration status (yes vs. no), - education (ISCED low vs. middle vs. high), - household size (1 vs. 2 vs. 3 or more persons). Methodology: Sand, Matthias and Kunz, Tanja (2020). Weighting in practice. Mannheim, GESIS - Leibniz Institute for the Social Sciences (GESIS Survey Guidelines). DOI: 10.15465/gesis-sg_030

2.2.1.1 Total weights

Total weights and geographical study centre allocation

2.2.1.1.1 Total weight normalised (18 study centres)

Type	Variable
Superordinate	Correction weights, p. 35 (Examination)
In subsection 1	Total weights
Title	Total weight normalised (18 study centres)
Description	Total weight (product of design weight and calibration weight), standardised at study centre level so that the sum of the weights corresponds to the number of participants at the respective study centre (at the time of weighting). Assignment of cases to study centre see variable wgt_geoSC_18sc.
Data type	DOUBLE
Scale niveau	metric

2.2.1.1.3 Geographical centre assignment: Study centre according to address at the time of invitation (18 study centres)

Type	Variable
Superordinate	Correction weights, p. 35 (Examination)
In subsection 1	Total weights
Title	Geographical centre assignment: Study centre according to address at the time of invitation (18 study centres)
Description	Study centre according to the address at the time of invitation. May deviate from the nominal study centre assignment in the case of centre changers/movers.
Data type	INTEGER
Scale niveau	nominal

3.3.1.1.2 Contraceptives and hormone replacement products

Birth control pills, hormonal contraceptives, topical contraceptives, hormone replacement products. Based on the data available, it is assumed that the majority of women are not aware of the difference between the contraceptive pill and the mini-pill. The

duration of use of the contraceptive pill is therefore NOT included in the calculation of the total duration of use of contraceptives. Similarly, information indicating parallel use of the contraceptive pill and the mini-pill is not considered implausible, unlike the parallel use of other hormonal contraceptives. First-time use of hormone replacement products at an age 70 years was assessed as implausible.

Die Lebenszeitprävalenzen der Psoriasis scheinen zu hoch, obwohl die Angaben in allen Filter- und Folgefragen (z.B. 12-Monatsprävalenz, Häufigkeit Psoriasisarthritis, Flächenbefall der Psoriasis) plausibel sind. Bei weiterführenden Analysen empfiehlt es sich daher Psoriasisfälle nur über die 12-Monats-Prävalenzen zu definieren.

3.5.1.3 Age at cardiovascular relevant surgeries

Es wird empfohlen bei Auswertungen das Alter bei Operation nur kategoriell (z.B. in 10-Jahres-Altersklassen) zu verwenden.

3.5.1.3.1 Age at heart valve surgery

Type	Variable
Superordinate	Derived variables HKE, SWE and HK-relevant OP, p. 128 (Examination)
In subsection 1	Age at cardiovascular relevant surgeries
Title	Age at heart valve surgery
Description	Age at heart valve surgery, if age is available, otherwise calculated based on basis_udat, basis_age and d_op_alg1a_[a/j] or d_op_alg1a_[a/j]_fu. Preliminary wave data is not taken into account in the calculation.

Superordinate	Med. An. - Gastrointestinal/liver diseases (U1-U3), p. 285 (Examination)
Title	Status of the examination module Med. an. - gastrointestinal-/liver disease. U1-U3)
Description	Indicates whether the examination module Med. an. - Gastrointestinal/liver module (U1-U3) was completed correctly or why not
Data type	SMALLINT

Scale niveau	hierarchical
Approval	Raw data not quality-assured
Option list	untersuchungsstatus (Examination status acc. to t_dd_examination_status); see p. 6122

i) Baseline examination

Type	Data element
Unique identifier	u1_unt307_status

3.9 Medication recording

Type	Project
Superordinate	interview, p. 41 (Program)
Title	Medication recording
Name	Medication recording
Description	-
Subordinate	Derived variables medication registration, p. 301, IDOM Completion, p. 327, IDOM Evaluation, p. 329

3.9.1 Derived variables medication registration

Type	Examination (unit)
Superordinate	Medication recording, p. 301 (Project)
Name	Derived variables medication registration
Title	Derived variables Medication registration
Description	Derived variables for recording medication. As the complete quality assurance of the medication recording will still take some time, the intake of certain medications is determined here in part from raw data that has not yet been quality-assured and may therefore also still contain incorrect information.
Unique identifier	abg_idom
Approval	Quality-assured data

Datenqualitätssicherung Baseline (NAKO-499): Es können noch doppelt erfasste Medikamente im Datensatz enthalten sein. Darreichungsform, Preis- und Herstellerinformation wurden noch nicht qualitätsgesichert. Dosierungsangaben müssen vor Verwendung noch einmal geprüft und ggf. überarbeitet werden, da die Eingaben u.U. fehlerhaft sind. Dies betrifft insbesondere Depotpräparate, Augen-, Nasen- und Ohrentropfen sowie Insulinpräparate und Präparate mit wechselnder Dosierung. Systematische Zentrumsunterschiede bei der Erfassung können darüber hinaus zu regionalen Unterschieden insbesondere bei Vitaminpräparaten führen.

3.10.1.1 Age at initial diagnosis

The data is based on self-reported data. Data less than 30 years old should be considered potentially erroneous and excluded from analyses if necessary. The data is obviously subject to a strong memory BIAS. Age-dependent analyses should therefore never be carried out with the exact age data for each year, but only with suitable age groups (at least 5 years, better 10 years for knee osteoarthritis).

3.13.1.2 Age at implantation of right hip prosthesis

Type	Variable
Superordinate	Surgeries, p. 426 (Examination)
Title	Age at implantation of right hip prosthesis
Description	Age at implantation of right hip prosthesis. Calculated from basis_udat, basis_age and d_op_alghip2_[a/j]r or d_op_alghip2_[a/j]r_fu. Preliminary wave data is not taken into account in the calculation.
Unit or input format	Years
Data type	INT(4)
Scale niveau	metric
Approval	Quality-assured data
Option list	global_missing (Definition of globally used missings)

i) Baseline examination

Type	Data element
Unique identifier	u1_a_op_age_alghip_r

Options of the option list "global_missing":

Key	Identifier	Count in: Baseline examination	Missing

3.15.1.2 Employment status and occupation

Angaben zum Erwerbsstatus enstprechend des "Labour-Force-Konzepts" der International Labour Organisation (ILO). Erwerbspersonen sind Personen, die aktiv am Erwerbsleben teilnehmen oder teilnehmen wollen. Dies sind folglich zum einen Erwerbstätige wie Arbeitnehmer, Selbstständige, mithelfende Familienangehörige und auch Menschen in einer beruflichen Ausbildung. Erwerbstätige sind ebenfalls Menschen in geringen oder unregelmäßigen Beschäftigungsformen (Minijobs, 450-Euro-Jobs, Ein-Euro-Jobs). Zu den Erwerbstätigen zählen auch Personen, die ungeachtet der tatsächlich geleisteten Arbeitszeit eine Bindung zu einem Arbeitgeber haben (Personen in Mutterschutz, Elternzeit und in sonstiger Beurlaubung). Zu den Erwerbspersonen zählen zweitens Erwerbslose, das heißt Personen, die nicht erwerbstätig sind, aber für die Aufnahme einer Erwerbstätigkeit zur Verfügung stehen und aktiv nach einer Arbeit suchen (Bezieher von ALG I und ALG II). Nichterwerbspersonen hingegen nehmen nicht aktiv am Erwerbsleben teil, weil sie bereits aus dem Erwerbsleben ausgeschieden sind (Rentner) oder sich noch in Ausbildung befinden (Schüler, Studenten) oder anderweitig dem Arbeitsmarkt nicht zur Verfügung stehen (Bundesfreiwilligendienst, freiwilliges soziales Jahr). Beim Umfang der Erwerbstätigkeit wird zwischen Teilzeit- (=35 h/Woche) unterschieden. Referenzen: Statistisches Bundesamt. (2018). Statistisches Jahrbuch. Deutschland und Internationales. 3.15.1.2.14 Occupational code ISCO

Type	Variable
Superordinate	Derived variables Sociodemographics, p. 504 (Examination)
In subsection 1	Employment status and occupation
Title	Occupational code ISCO
Description	The variable stores 556 occupations according to the International Standard Classification of Occupations (ISCO-08). After manual sighting of the original designation in combination with information on the occupational status (se_b7), the nearest valid ISCO-08 code was selected. Further information on this can be found in the QA report on proposal NAKO-434 sub-section occupation.
Data type	SMALLINT(3)
Scale niveau	hierarchical

3.15.1.2.15 One-digit ISCO-08 codes

Type	Variable
Superordinate	Derived variables Sociodemographics, p. 504 (Examination)
In subsection 1	Employment status and occupation
Title	One-digit ISCO-08 codes
Description	Corresponds to the 1-digit ISCO-08 major groups. The command iscogen from Stata was used for the creation (Jann 2019). In some cases, the coding of occupations was only possible at the 1-digit level. These cases are in the 4-digit residual category with "x000" and do not contain more information than the 1-digit codes.

3.15.1.2.19 Socio-economic status

Type	Variable
Superordinate	Derived variables Sociodemographics, p. 504 (Examination)
In subsection 1	Employment status and occupation
Title	Socio-economic status
Description	ISEI is used as a measure of the socio-economic status of an occupation and is based on data on the relationship between education, occupation and income. The data basis of the ISEI-08 (International Socio-economic Index of Occupational Status) is the International Social Survey Programme (ISSP). The variable can take on values between 10 and 89. The ISEI-08 was constructed using the iscogen command from Stata (Jann 2019).

3.15.1.2.20 Prestige scale

Type	Variable
Superordinate	Derived variables Sociodemographics, p. 504 (Examination)
In subsection 1	Employment status and occupation
Title	Prestige scale
Description	The Standard International Occupational Prestige Scale SIOPS is based on surveys in which people rated job titles in terms of their social prestige. The results were transferred into an internationally comparable, standardised prestige scale for occupations, which is regularly updated (Christoph et al. 2020). The scale ranges from 12 (e.g. shoe shiners) to 78 (physicians). The SIOPS prestige scale was constructed using the iscogen-Commands of Stata (Jann 2019).

3.15.1.2.21 Employment

Type	Variable
Superordinate	Derived variables Sociodemographics, p. 504 (Examination)
In subsection 1	Employment status and occupation
Title	Employment
Description	The variable has the values 1 and 0, is based on a_ses_beruf and is used to calculate a_esec. Employees receive 1, trainees and the self-employed 0. Calculation of a_selfemp is currently only available for the baseline data.
Data type	TINYINT

3.15.1.2.22 Number of employees

Type	Variable
Superordinate	Derived variables Sociodemographics, p. 504 (Examination)
In subsection 1	Employment status and occupation
Title	Number of employees
Description	The variable has the values 0, 2 and 11, is based on a_ses_occupation and is used to calculate a_esec. The grouping procedure, including information on the individual classes, is described in the "ESeC User Guide" by Harrison and Rose (2006). The grouping rules were adapted to the special features of the NAKO dataset and distinguish between large (>= 5 employees) and small employers (0 to 4 employees). Calculation of a_nempl is currently only available for the baseline data.

3.15.1.2.23 European Socio-economic Classification

Type	Variable
Superordinate	Derived variables Sociodemographics, p. 504 (Examination)
In subsection 1	Employment status and occupation
Title	European Socio-economic Classification
Description	In contrast to ISEI-08 and SIOPS, ESeC (European Socio-economic Classification) is not a continuous status measure, but a categorical, non-hierarchical class scheme (Harrison and Rose 2006). ESeC was developed specifically for the European region. Technically, ESeC classes can be constructed using ISCO-08 occupation codes (3-digit) supplemented by information on occupational status (employer, self-employed or employee), the size of the organisation and whether or not the person is a supervisor. Calculation of a_esec is currently only available for the baseline data.

3.15.1.3 Education

A preliminary derivation according to the International Standard Classification of Education (ISCED) 97 (UNESCO 1997) has been used to depict socio-economic status. The ISCED describes qualitative differences in school and vocational education, summarises school and vocational educational qualifications, is oriented towards educational certificates and ensures the possibility of international comparability (Lampert & Kroll 2009). The derivations are to be regarded as provisional, as the additional plain text data on school and vocational qualifications has not yet been fully analysed.

3.15.1.4 Income

The income available to a person or household is used as an important indicator alongside education and occupation to measure social inequality. With the help of need weights, savings made by larger households compared to smaller ones as a result of joint economic activity are taken into account. The need weight is calculated according to the "new OECD scale": The first adult is assigned a weight of 1. For each additional adult living in the household, the value 0.5 is added and for each child under 14 living in the household, the value 0.3 is added. References: Lampert, T., & Kroll, L. E. (2006). Measuring socioeconomic status in socio-epidemiological studies. In Health inequities. Foundations, problems, concepts (pp. 309-334).

4.2.1 Derived variables Everyday activities

Type	Examination (unit)
Superordinate	Everyday activities, p. 692 (Project)
Name	Derived variables Everyday activities
Title	Derived variables everday activities
Description	Derivation of 6 new variables partly by converting the 8 IADL variables into binary variables (cf. McGauran, Berger and Robra, 2002): 4 variables for the need for help (three from binary variables), 2 for the quantification of response variability. The derived variables were not calculated for participants under 60 years of age who incorrectly completed the questionnaire. Extract from the df100k report on possible effects associated with the optimisation of the touchscreen in Q3 2015: The jump in the relative proportion of missings (respondents who did not answer any of the questions) between Q3 2015 and Q1 2016 by more than 15 percentage points from 9.5% to 25.1% is striking. This general pattern is consistent across all age and gender groups and is most pronounced among the oldest and female respondents. However, the sharp increase is region-specific and can only be observed in certain study centres. Similar to the increase in missings, the need for help rose sharply between Q3/2015 and Q1/2016 (from 39% to 45%), although no consistent pattern is discernible within the individual study centres. The relative frequency of response category 1 (“Not at all difficult“) for each of the 8 items drops sharply by around 10 percentage points between Q3/2015 and Q1/2016. There is no distinct temporal pattern in the response categories 2-4, nor is there a seasonal pattern in the response frequencies.

Title	Derived variables Professional recognition
Description	Derived variables Professional recognition, derived from the touchscreen module Professional recognition (ERI) baseline in accordance with DF100k report NAKO-434 Professional recognition from 13 July 2020. The ER ratio (ratio of the sum scores of stresses and rewards, multiplied by a correction factor that compensates for the unequal number of items) and the respective tercile of the ER ratio were calculated. As three items of the rewards scale were only collected from October 2015 due to a questionnaire error, the individual scales for stress and rewards were not calculated here. These can be determined from the raw data (ts_eri module) if required. The use of the correction factor leads to plausible values for the ERI ratio without systematic distortion, despite the failures for the three items. The position measures (mean and dispersion) of the subscales for Effort and Reward as well as the derived ERI ratio are comparable to the Socio-Economic Panel and the Swedish SLOSH study, which indicates a high validity of the ERI measurement in the NAKO. The ER ratio increases with age and is always higher for women than for men, which is due to lower professional pay and recognition. For study participants over retirement age, ERI fell as expected, as partial retirement is generally associated with a lower workload. The ER ratio correlates with the self-assessment of general health (d_qol2).

Name	Professional recognition (U1)
Title	-
Description	Professional recognition, version dated 13 February 2015. The professional recognition module is part of the level 2 touchscreen interview. It consists of two filter questions and 10 items that measure the extent of psychological workload using the Effort-Reward-Imbalance model (ERI model). The extrinsic component of the model consists of the two scales effort and reward. It is postulated that, in addition to the individual scales, their combination in the form of an imbalance in favour of the rewards leads to an increased risk of illness (Siegrist, 1996). In the NAKO, the short version with 10 items was used. On the expenditure side, three questions measure the extent of time pressure and workload (ERI1/ERI2/ERI3). On the reward side, the constructs of recognition (esteem, ERI4/ERI8), job security (ERI6/ERI7) and promotion opportunities (job promotion, ERI5/ERI9/ERI10) are measured using 7 questions, whereby the direction of the scale is reversed for ITEMS ERI5-7 (Siegrist, Li, Montano, 2014). Quality assurance of the baseline data as part of NAKO-434. There are a small number of discrepancies between the answers on employment here (d_eri1) and the answers to the more detailed question on employment in the interview (d_se_b3), which can possibly be explained by the greater scope for interpretation of the touchscreen question. Derived variables are located in abg_eri.

Description	Drugs, version dated 8 May 2014. 85% of all participants completed the module in the baseline. The first set of questions relates to the previous use of 10 different substance classes. The option "do not wish to answer" was used relatively frequently, possibly due to the increased sensitivity of the participants, as these are mostly illegal drugs. It is also possible that some substances were unknown to the participants. The proportion of "don't want to answer" was even higher in the complex of questions on the lifetime frequency of use of individual substances (only after answering the first question in the affirmative), although the lack of memory of the exact frequency may also have played a role. There were no implausible responses. In the case of "other opiates", which are more frequently used for medical purposes, there was an increase in use with age, in contrast to the other substance classes. In contrast, cannabis, cocaine and synthetic drugs were predominantly used by younger and middle-aged people, most frequently in Berlin-Mitte, Berlin-Süd, Hamburg, Mannheim and Freiburg. Participants in Halle and Neubrandenburg were the least likely to report drug use. Men were about twice as likely as women to have ever used the various substances, with the exception of "other opiates". The overall quality of the data can be described as very good. For reasons of social desirability, a certain degree of underreporting can be assumed. In addition, the sample is not fully representative in terms of social class. Baseline data checked in QS report NAKO-510 (DF200k).

Description	Weight history, version from 28 September 2018. Baseline data checked in the QA reports NAKO-126 (DF100k) and NAKO-596 (DF200k). Adjustment of secondary examination data carried out analogue to baseline, no QA report. Implementation of the QA was carried out in accordance with the reports, with the exception of the upper limit, from which information on 'implausible value' was recoded. Information was recoded for values over 290 kg. When applying for the variables on weight at the age of 18, 30 and/or 50 years, please always apply for the variable on measured height (a_anthro_groe) so that the BMI can be calculated if necessary.

Description	Cardiovascular Health, version dated 27 September 2018; A comparison of the baseline data with that of the calibration study showed that the agreement (reliability) for the individual variables of the module is generally moderate to good. The stability of the data was greater when the interval between the examination dates was shorter (<0.5 years vs. 0.5 to <1.5 years). The baseline data was checked and adjusted according to the QA reports NAKO-104 (DF100k) and NAKO-435 (Df200k). The data from the second examination are not quality assured.

4.16.1.2 How often in the past 12 months have you had...

Im folgenden Abschnitt geht es um die Häufigkeit von unterschiedlichen Infektionen in den vergangenen 12 Monaten. Zählen Sie bitte zusammen, wie oft Sie in den vergangenen 12 Monaten an diesen Infektionen litten. Beispiel: Wenn Sie in den vergangenen 12 Monaten 3-mal Schnupfen und 1-mal Mittelohrinfektion hatten, dann sind es insgesamt 4 Infektionsepisoden (somit wählen Sie die Antwortmöglichkeit "3-4-mal"). Wenn das Fieber länger als 1 Tag dauerte, bitte als ein einmaliges Ereignis zählen (z.B. Fieber für 7 Tage = 1-Mal)

4.16.2.2 How often in the past 12 months have you had…

Im folgenden Abschnitt geht es um die Häufigkeit von unterschiedlichen Infektionen in den vergangenen 12 Monaten. Zählen Sie bitte zusammen, wie oft Sie in den vergangenen 12 Monaten an diesen Infektionen litten. Beispiel: Wenn Sie in den vergangenen 12 Monaten 3-mal Schnupfen und 1-mal Mittelohrinfektion hatten, dann sind es insgesamt 4 Infektionsepisoden (somit wählen Sie die Antwortmöglichkeit "3- bis 4-mal"). Wenn das Fieber länger als einen Tag dauerte, bitte als ein einmaliges Ereignis zählen (z.B. Fieber für 7 Tage = 1-mal)

Type	Examination (unit)
Superordinate	Touchscreen survey: Physical activity, p. 992 (Project)

Name	derived variables - physical activity
Title	-
Description	Prepared derived variables and validation of the results of the TS Physical Activity module according to the QA reports NAKO-127 (DF100K), NAKO-417 (DF200k) and NAKO-941 (2U). The Global Physical Activity Questionnaire (GPAQ) is prepared in accordance with the WHO analysis guide (https://www.who.int/ncds/surveillance/steps/resources/GPAQ_Analysis_Guide.pdf). For the activity areas surveyed, there are 5 subdomains: intensive and moderate physical activity at work, physical activity when travelling and intensive and moderate physical activity during leisure time. - The naming of the variables is based on the GPAQ analysis guide. However, in order to distinguish the variables on time per week from the variables on MET minutes per week, the syllable met was added to the variable name for the latter. The quality assurance of the GPAQ data indicates overreporting of physical activity. This should be taken into account when analysing and interpreting the GPAQ data. If necessary, the GPAQ data can be calibrated using accelerometry data.

4.21.1.1 Validated self-declaration on health insurance status

As part of the quality assurance of the baseline survey, the self-reported health insurance status of the study participants from the touchscreen survey was checked for plausibility using the voluntary information on health insurance (insurance type and name) recorded by the independent trustee office (THS) as part of the consent process and corrected if necessary. Self-reported information on health insurance status was only collected from April 2017 onwards and is therefore only available from around 91,000

participants. The THS collected information on health insurance from 188,974 participants (approx. 92%). The proportion of missing values of 8% is due to participants who were not asked for consent to the collection and scientific use of secondary data from their health insurance or who did not give this consent. Information on health insurance status is available from both sources for 85,644 participants. Verified information was transferred to a new variable on health insurance status (a_kv_1). The degree of validation was also specified in the variable a_kv_1_sure. Self-reported information that matched the information recorded via the THS or was corrected using the reference information was labelled as "certain". All information that could not be verified with certainty (e.g. answer to the insurance backlog: "I don't know" or information changed after the QA) was rated as "not certain".

Type	Examination (unit)
Superordinate	Personality, p. 1095 (Project)
Name	Personality (derived variables)
Title	Derived variables personality
Description	Derived variables Personality: Personality dimensions derived from the TS modules Personality U1/U2 in accordance with DF100k report NAKO-136 dated 11 January 2019. The personality module of the touchscreen survey shows a low proportion of missing data and a high degree of plausibility of the derived personality dimensions. Regional differences in personality dimensions can be observed, which are presumably based on actual regional variability. In the second survey, only participants for whom no results were available from the baseline survey were interviewed.

4.26.1 Derived variables - tobacco

Type	Examination (unit)
Superordinate	Smoking, p. 1112 (Project)
Name	Derived variables - tobacco
Title	-
Description	Derived variables on smoking behaviour. Adjusted according to DF200k QA report NAKO-608. Information on smoking under the age of 5 was classified as implausible, as was quantitative information on smoking more than 120 cigarettes (6 packs) per day or more than 60 cigars, cigarillos or pipes per day. A separate QA of the complete baseline data is still pending, as is the preparation of the questions on the consumption of e-cigarettes, shisha and the like.
Unique identifier	abg_tabak
Approval	Quality-assured data

Calibration study	~ 5,800	~ 5,800	15/11/2022	08/10/2024	~ 5,800

4.26.1.1 Tobacco

By neglecting any missing intensity information and taking into account the information on the Vascular Explorer, more smokers are detected in the variable a_smok_stat_noint than in a_smok_stat_qn (in the DF100k this concerns approx. 120 never smokers and 535 former smokers as well as >1,100 with unknown smoking status, who are categorised here as current smokers). For the reasons for quitting smoking, see TS module tobacco (t_tabak).

4.26.1.1.1 Smoking status

Type	Variable
Superordinate	Derived variables - tobacco, p. 1112 (Examination)
In subsection 1	Tobacco
Title	Smoking status
Description	Smoking status derived from detailed information on smoking behaviour. Corresponds to the further availability of intensity information and can be used e.g. for more precise quantification of smoking behaviour, but has more “smoke status unknown” than a_smok_stat_nointens.
